

NORTHSTAR

"The Truck Camper People"

A FAMILY AFFAIR...

Quality Campers Since 1961

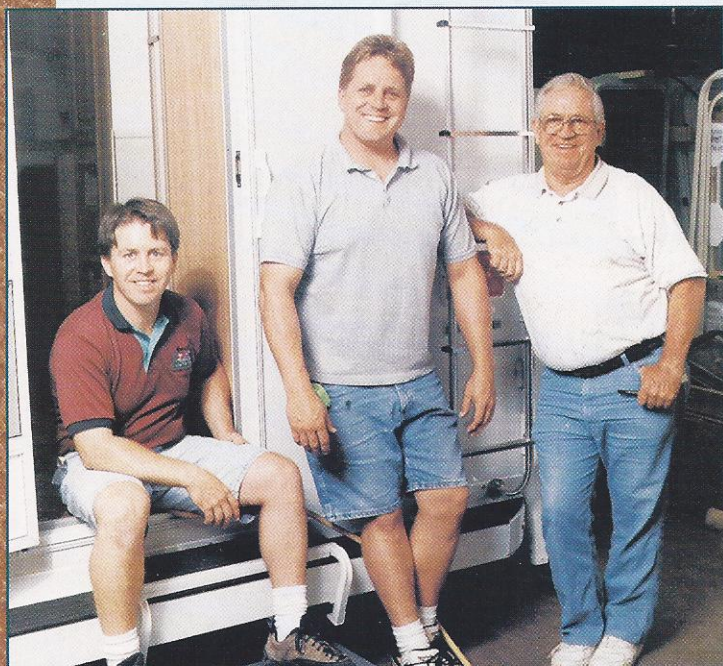

Welcome to the fine "family" of *NORTHSTAR* Campers — owned and operated for over forty years by a family that is in its third generation of manufacturing slide-in truck campers. We are in Cedar Falls, which is located in the northeast corner of Iowa. We are proud of our Midwestern roots and what our "family" has to offer.

Ralph C. (Tex) Willett founded this business in 1961 with his sons, Robert and Jack. Since the early 1980's Robert's sons, Rory and Rex, have been directing the company. Much can be said on how continuity of ownership translates into excellence. Each generation, as committed as the previous one to maintaining their competitive edge by constantly evaluating their performance and striving for improvement. Passing on the knowledge gained from proven techniques of construction

and at the same time, pursuing new and better methods.

Tex Willett

Rory, Rex and Robert Willett

We cordially invite you to get to know us through the next pages as you explore our product line so that we have an opportunity to demonstrate our

commitment to quality.

Iceland

*Downtown Reykjavik, Iceland, serves as a background for this NORTHSTAR Camper.**

Custom made campers for Japanese Imports.

Since 1987 NORTHSTAR has been successfully distributed in many parts of the world. Shipments have gone to Sweden, Norway, Japan, Holland, South Africa, Iceland, Germany and Canada — with more to come.

Our NORTHSTAR camper owners from throughout the world have provided valuable and positive consumer feedback as they test camper performance on all types of terrain. We continue to learn and improve our campers from their experiences. We are truly expanding our horizons with NORTHSTAR's involvement with such culturally and geographically diverse camper owners.

Japan

SPANNING THE GLOBE

Soviet Union

Global Design Influence. For over a decade NORTHSTAR has been importing and continues to import our insulated windows from Sweden. Based on their knowledge of cold climates, they offer the ultimate in cold weather camping and luxury. These windows are available exclusively on all NORTHSTAR hardwall campers.

A plastic frame surrounds the window instead of an aluminum frame. The pane is filled with argon gas to insure the window has minimal thermal conduction.

In addition, the windows have a "no-seum" screen to keep those unwelcome insects out. An added feature is that the screen and the shade both roll away so that the open window serves as an easy and convenient pass-through opening. When closed the pane recesses securely into the frame for silent travel and distinctive looks.

HUNTING THE RIGHT CAMPER??

"Prior to purchasing my Northstar, I really studied and compared numerous pickup campers on the market. The Northstar was my #1 selection because it had the most options I was looking for at a reasonable price, offered the durability for extreme conditions that I would be exposed to, and looked fantastic on my truck. I plan to really use my Northstar, much more than the average person; so quality was at the top of my priority list. I made the best decision and got the best camper made today."

Myles Keller

Mr. Keller is a world renown bow hunter who travels to countless remote sites, e.g. Minnesota, Colorado, and Canada, to use his bow hunting skills. Among other awards, he is currently in the Bow Hunting Hall of Fame.

R.C. Willett Co. Inc.

Why NORTHSTAR?

There are many factors to consider when purchasing a new camper...

- *How am I going to match up the right camper with the right truck?*
- *Will I have a stable ride and accurate control when going down the interstate or narrow back road?*
- *Am I actually getting the quality product I was told I would get?*

We make it a priority to listen and incorporate customer concerns, like those above, into our manufacturing philosophy. NORTHSTAR is proud that we build our campers differently than other truck camper manufacturers. Sound construction means using better materials and established production processes on each Northstar unit.

Over the past three decades, one of our greatest "success indicators" used in measuring NORTHSTAR's performance has been our camper's rugged design, which has contributed to added years of enjoyable use. Simply put, they are built well and last a long time.

We *SPECIALIZE* in the production of truck campers and only truck campers. Rather than having research and production energies expended on the design of fifth wheels, travel trailers, motorhomes and/or vans — we are dedicated solely to our truck campers. We specialize because we want to offer the best. We strive to continue the excellent standard of quality our past customers are accustomed to and which our new customers deserve.

We invite you to bring us all your questions and concerns about a NORTHSTAR. The more you know about a NORTHSTAR, the easier your decision will be.

Construction & Materials

Whether building a pop-up or a hardwall NORTHSTAR camper, the same construction philosophy is employed. We search for and purchase the best materials available. Our trained and skilled NORTHSTAR production staff uses all premium underlayment plywoods and pine studding in the walls and cabinets. These materials are easy to verify by looking inside our cabinets and under the seat cushions. We encourage you to put us to the test.

Craftsmanship combined with quality material is a winning combination. Our production process mandates that each and every joint throughout the camper is glued together and reinforced with hardened steel screws. NORTHSTARS are built to last.

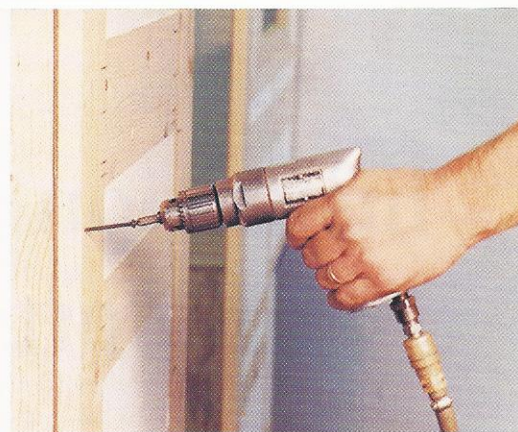

Now you have the beginnings of one of the toughest campers made. During the next phases of construction, foam insulation is hand fit into place. Wiring, gas and plumbing systems are designed and installed per code requirements with the utmost care and concern for the user. Go ahead... check out the inside of our cabinets to see our sturdy construction methods, sit on the seat cushions and feel the difference in support. The extra effort we take in quality construction and premium materials will speak for itself.

Now you have the beginnings of one of the toughest campers made. During the next phases of construction, foam insulation is hand fit into place. Go ahead... check out the inside of our cabinets to see our sturdy construction methods, sit on the seat cushions and feel the difference in support. The extra effort we take in quality construction and premium materials will speak for itself.

Breathe Easier!

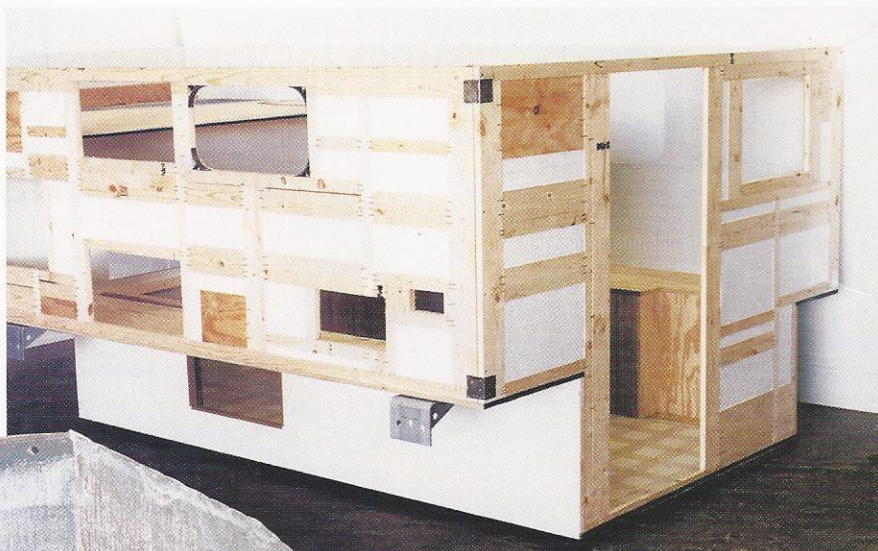

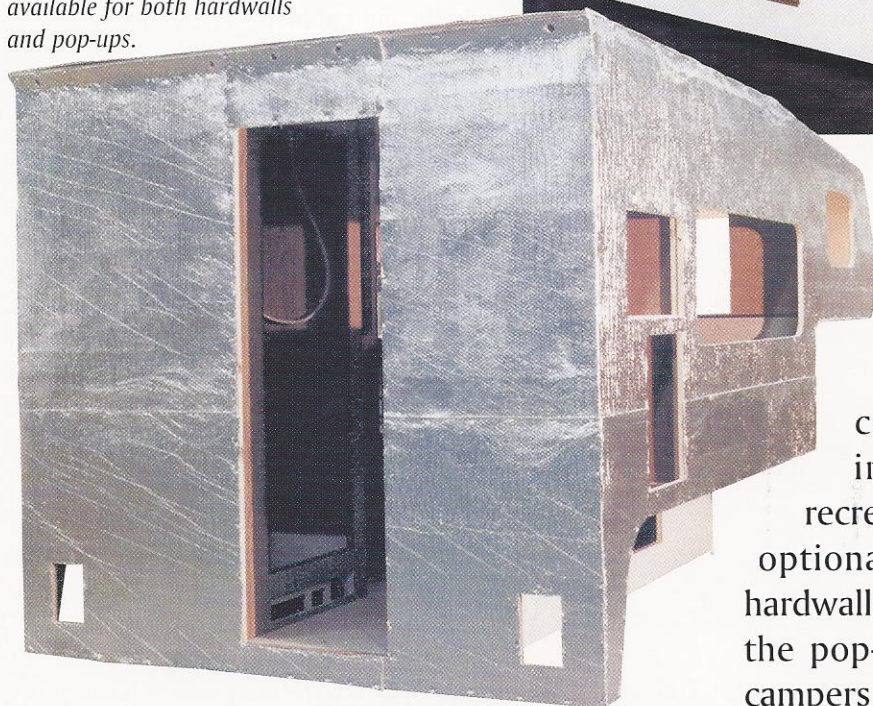

That's right! You can breathe easier in a NORTHSTAR camper because we care about formaldehyde emissions. These emissions are found in varying levels of concentration in various underlayment paneling available for manufacturing. We have chosen a premium underlayment paneling tested at only .02 parts per million formaldehyde emissions at a cost more than double other available panelings that have a much higher part per million concentration. We are decidedly conscientious about contaminants and their potential harm on the proud new owner of a NORTHSTAR.

Rest easier, safer
and healthier in a
NORTHSTAR!!!

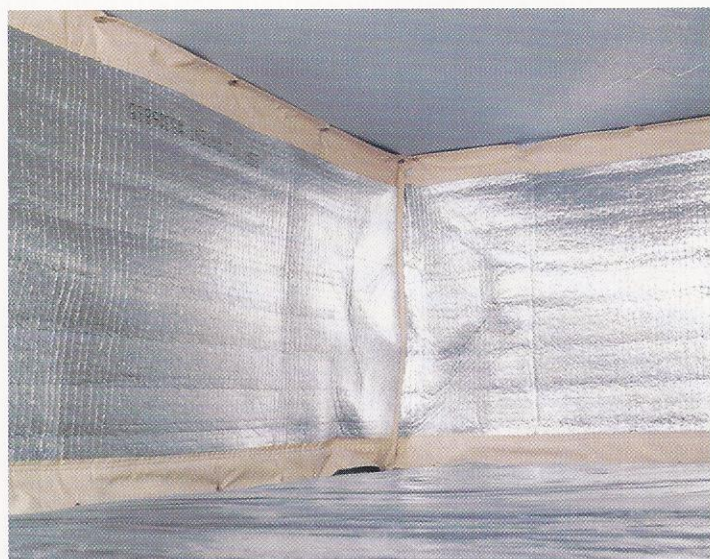

Insulation *For* Comfort

Astro-foil body wrap (metalled units only) available for both hardwalls and pop-ups.

Pop-up standard insulation and body

Good insulation that is installed properly works well for both the cold and the heat you may encounter while traveling or camping. NORTHSTARS are well insulated for your specific recreational needs. In addition, we offer optional astro-foil and windows in the hardwalls and the optional Arctic Pak kit for the pop-ups. Added protection for those campers who have no boundaries.

Snap-up Arctic Pak adds R-9 and covers all canvas, windows and door glass (except behind sink)! Roof raises and lowers with Arctic Pak in place.

Insulated gas filled window. (Hardwall units only)

The Skinny on weight

Every truck camper shopper should be interested in how much a camper weighs, how that weight compares with the competition, and should be sure that the weight matches the GVWR (Gross Vehicle Weight Rating) of their truck.

The certified weight label is normally located on the back of the truck camper, and lists the total weight with standard equipment, including full water and propane tanks, and excluding any options. Standard equipment varies from manufacturer to manufacturer and thereby affects the certified weight.

It is important for the camper shopper to have accurate data to make the most informed decision. For example, a competitor's pop-up camper may have a certified weight listing of only 975 pounds, while a

NORTHSTAR pop-up is 1380 pounds. Upon further investigation, the shopper finds the other pop-up brand does not include a refrigerator or furnace as standard options; may or may not include jacks; and has a 12 amp converter with 15-amp cord instead of a 20-amp converter with a 30-amp cord.

Of course, the competitor's certified weight would be less than a NORTHSTAR because the NORTHSTAR comes standard with all that equipment and more. In addition, NORTHSTAR lists the weight of all available options so that the buyer can keep track of the weight as he customizes the specific options.

Don't be fooled! A NORTHSTAR pop-up or hardwall could be up to 200 pounds heavier than other brands because of the *quality of heavier materials and manufacturing processes used*. Every NORTHSTAR has a 5/8" premium underlayment floor and outs (the area that goes over the truck bed), pre-wrapped corners with galvanized steel, deep storage under the cabovers of pop-ups with the lift-up portion reinforced on a solid frame... just a few unique features that make a difference in a NORTHSTAR.

STABILITY and CONTROL! Why Narrower IS Better!!

ENGINEERED FOR SAFETY. An attractive design advantage of a pop-up camper is its lower center of gravity and narrower 7 foot body width. This design provides more stability and ease in handling. Most full-size pickups are 6 foot wide, so the narrower width of the NORTHSTAR will improve the ride, control, ability to navigate while in traffic and the ability to see what is being towed.

In addition to the 7 foot pop-up, NORTHSTAR builds four hardwall campers in a narrow width and 3 more models in a 7 foot 6 inch body width — which is the widest camper this company chooses to produce. To illustrate what the extra width and weight does to the center of gravity for control and stability, picture a person holding a 10 pound dumbbell in each hand at shoulder width. If the person were shoved off balance, he would be able to

remain stable and could recover quickly. However, if the person extends the dumbbells out away from the shoulders, it becomes much easier for the same shove to cause a loss of balance and difficulty in recovering. The same would be true for the pick-up truck.

Even though the camper shopper may be tempted by wider brands that appear to have vast interiors with travel trailer style bathrooms, it may be wiser to consider the stability and control offered by the Northstar units.

In summary, the bigger the camper the more weight. The longer and wider the camper - the more leverage that will be created by the weight. NORTHSTAR cares about quality and safety which translates into dollar value for the new owner. The NORTHSTAR units are designed with these important issues in mind.

Hopefully, this information will help you make practical choices for optimum control, safety and enjoyment! Check with a *NORTHSTAR* Dealer for all the LITTLE details.

There IS a difference! *THE NORTHSTAR WAY!!*

Pop-ups

Leave the Crowds Behind!

We surpass all the competition! You will be hard-pressed to find another manufacturer that builds a pop-up camper as deluxe as NORTHSTAR. Features and options galore that let you design your own personal adventure rig.

MC600 *For Imports & Small Domestic Trucks*

TC800

The TC800 is our most versatile and popular unit. Four different variations of the floor plan are available, with a wide variety of options to choose from. If you have a short bed truck you may add the optional wrap-around rear end option. This option does not change the interior of the layout that you decide on, but adds storage compartments and taillights behind your short bed truck for added storage and good looks! You may also choose to add scissor steps or a storage bumper with swing down step for easy entry when the camper is on your truck.

TS1000 Standard Bathroom

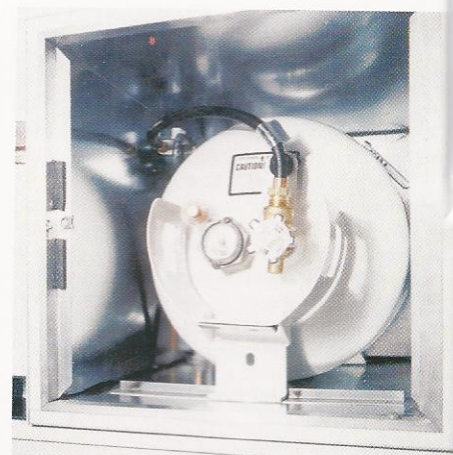

Standard Features and Popular Options for

Rolled Laminated Roof over caps the body of the camper and the clearance lights are in the extrusion instead of the body of the roof. Solid cast corners for reinforcement.

Something you never think about until you own it is the privacy factor. All 6 interior closures zip shut instead of hang like a tent window. When zipped you can count on total privacy in windy conditions and also have a no-wrinkle appearance.

Laydown L.P. Tank with gauge in a galvanized liner. Always installed away from appliances. *Compare and know why your Northstar is safer!*

Heavy Duty Vinyl Canvas Enclosure with Vinolin Interior is standard on all Pop-ups. Note the reinforced stitching backed with a five year warranty.

*ALL THE FEATURES!
ALL THE QUALITY!*

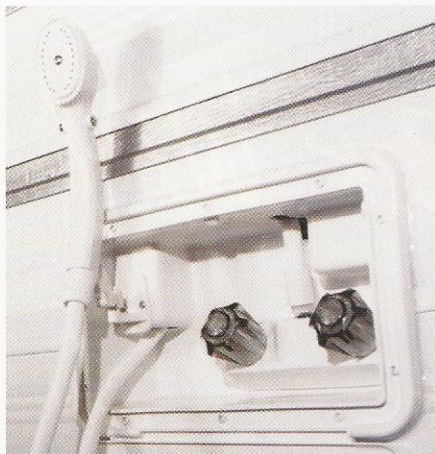

The deepest lift-up cabover storage area in the industry!

The ALL New Stainless Steel Bumper and Swing-down Step. Step can be moved to the right for use when towing. Lockable side door to store long items, and, of course, distinctive looks! Also note: Rear view window in bottom portion of door, location of outside shower, pre-wired for rear air with square window option.

the *NORTHSTAR* Pop-ups

Exterior Showers are available on every Northstar Model.

The All Electric Cool Cat Heat Pump provides 12,000 BTU's cooling and heat down to 40° ambient temperature. Note the clean appearance of canvas when in the down position.

Happijac Electric Jacks with hand controller makes for easy and safe on and off!

Finally! A great way to use the Exterior Shower. The ALL NEW Bivouac (Biv-wak) Buddy Shower enclosure. Includes everything you need to quickly set up and shower whether the camper is on or off the truck! Folds to a mere 4" flat for easy storage (right).

Rear Awning keeps your entry to camper dry and shaded! Awning is 6' wide and extends out 6'6". Rolls up easily to store in its own case.

Compact Rear Window Air 5,000 BTU.

HARDWALLS

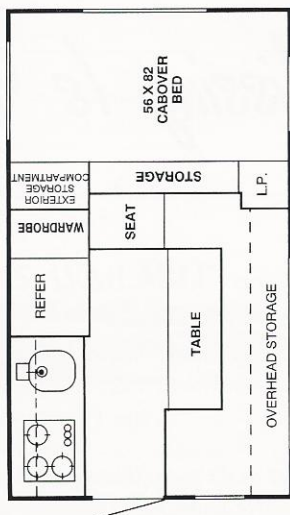

The Only Thing Missing Is You!

NORTHSTAR

TC800HW

The same great floor plan as our pop-up but with all the hardwall benefits and weighs under 1400 lbs.

9.5 IGLOO Side Dinette

NORTHSTAR
CAMPING WITH FAMILIES
FOR OVER 38 YEARS!

Photography includes options.

1. Ready to sleep in or store until the next trip.

Do some local sight-seeing or off-roading.

2. Raise until floor clears bed height.

3. Line truck up and slowly back under camper.

4. Plug in 12v connection and tiedown. Make sure items are secured in camper, and you are ready to go.
It's just that easy!

When you reach a destination you can unload and lower your camper in a few minutes. This frees your truck up to do so many different things. Run the boat back and forth to the water.

Whatever you do, come back to the camper and it's ready for you.

Safe, simple and secure.

10.5 XL

Our most deluxe model features maximum storage and liveability in a narrow 7'6" width!
